

My own planet...

Jupiter

Our star is called Sol.

It has planets that orbit it and everyone is different,

Planets are large natural objects that orbit, or travel around, stars.

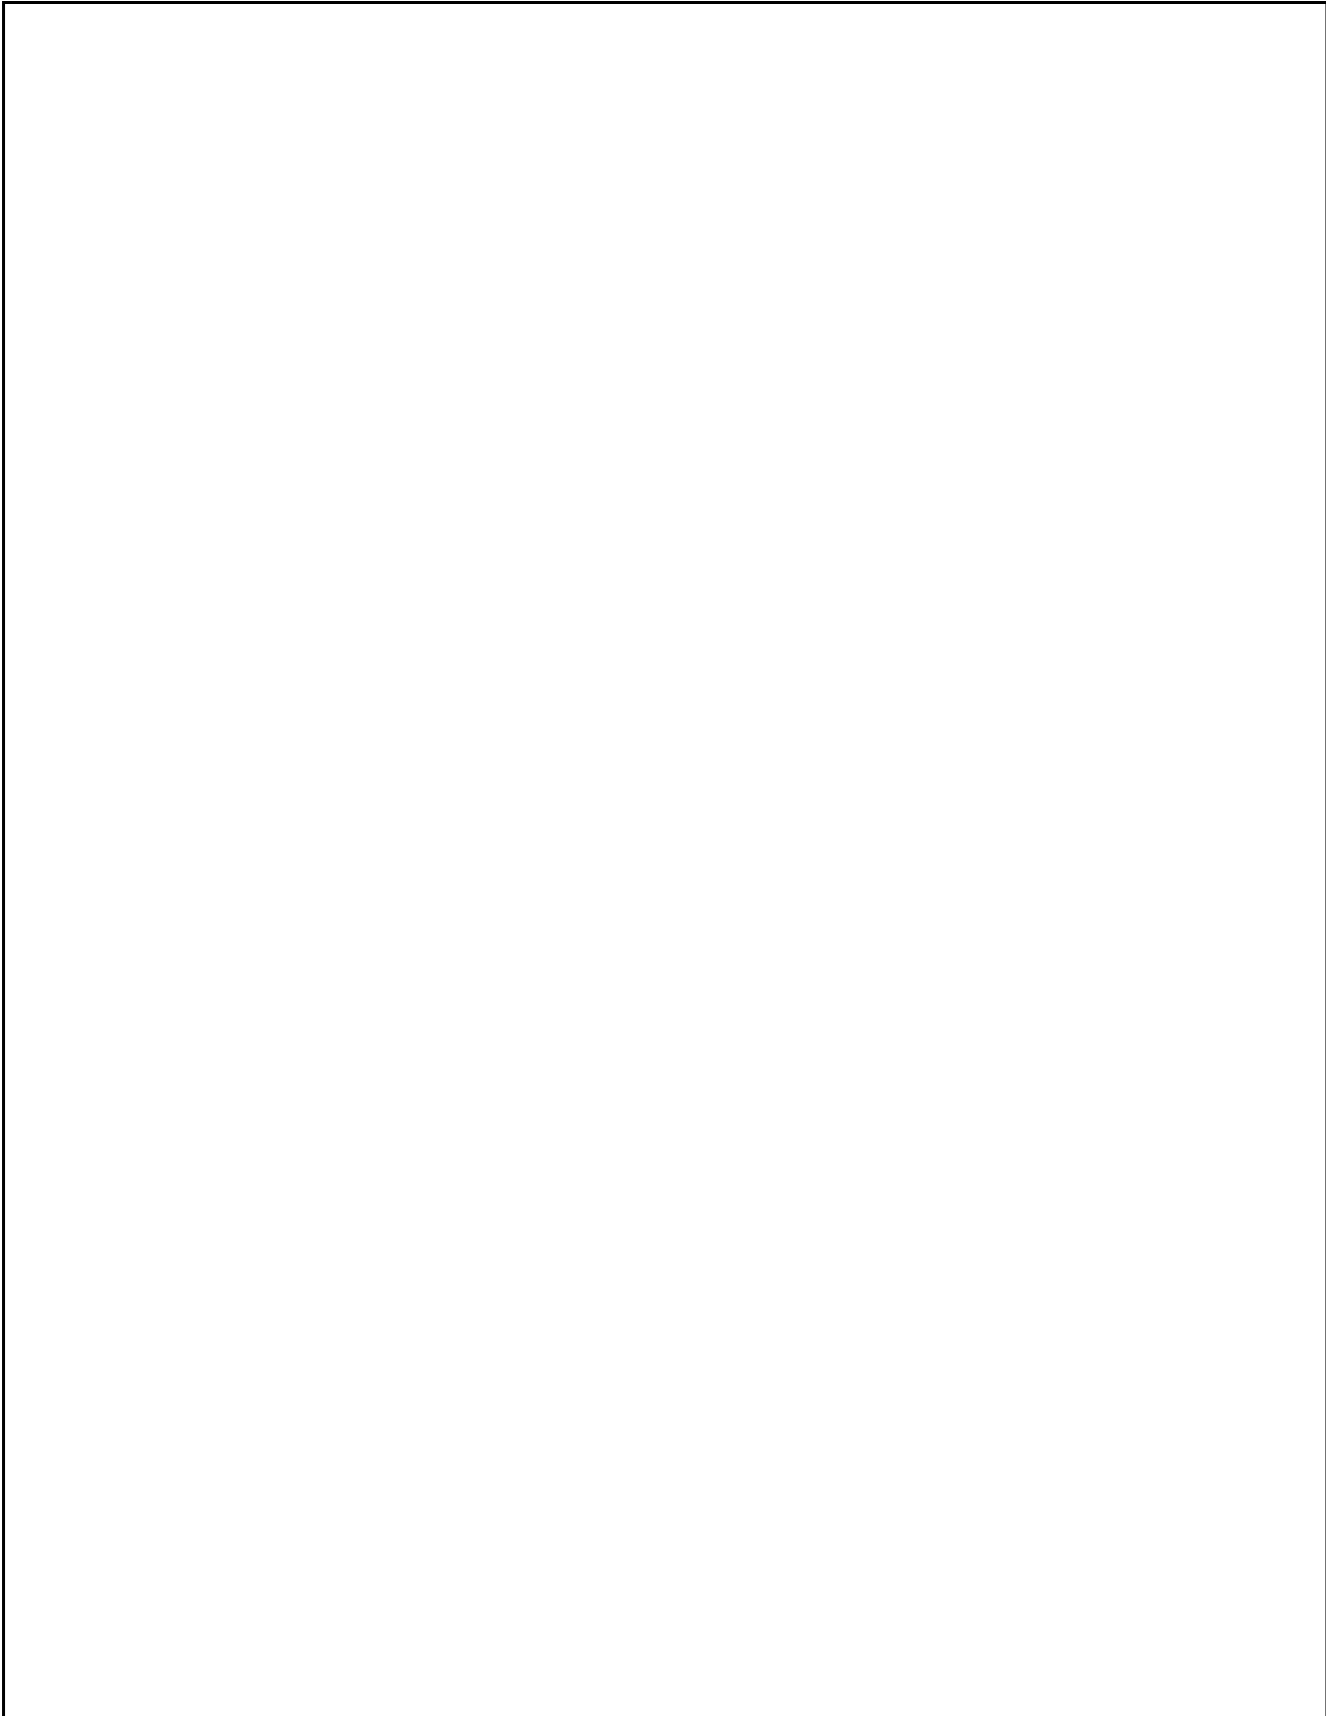

In our solar system we have 8 and in order from the closest to the Sun,

They are called Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.

Can you make your own planet...?

And tell us some facts about it...?

Then turn over and draw your very own planet.....

My Planet is called:

What is you planet made from?

What colour is your planet and what atmosphere does it have?

What kind of Sun does it orbit and how far away from it is it?
